

DISCS (series FT)

The melted discs sold by weight have the advantage that can at call be supplied with diameter and hole of the customer.

For a good functioning of circular brush required make that operation:

Bring the quantitative that you desire of cloth, you must rotate every 2 disks the brush that you have created, in way that the weft of cloth doesn ' t fitting never. This operation is used for avoid that the cloth don ' t rope-yarn and that the circular brush wear out in circular mode.

They go uses you with I affixed mandrels to you that come thread to you on the trees of blot some polishing, moreover couples to you to of the flange in PVC to variable diameters replace seams of the brushes standard, the who uses can in this case to construct the brush of the diameter and the thickness that wishes to second of its requirements.

COAGULATED (series DTC and DTCC)

It is woven of a pure cotton impregnated of one natural gum substance (caucciù). This material beyond to having the value of soft being is adapted to superficial the flat ones and to the cane it is in gold that silver and platinum. With it one is obtained polishing to mirror without superficial halos also on difficult to deal. It has moreover the advantage to remove part of the paste from polishing. During the working it produces one minimal powder amount but after to have been impregnated of paste this problem not verification more. The only found defect is that it stretches to warmth the dealt object. It is thrown normally through the recovery of the metals.

MICROFIBRA (series DTMF)

It is an innovative material, is a paper fiber, its value is not to obstruct the filters of blots some polishing, not to produce powder, not to warmth the objects deals to you. Ideal on all the superficial ones also on griffe because with the exception of the cotton it does not leave residual annoying to remove. The price to the Kg of melted discs is elevated regarding other burlaps having been a lot to read, a Kg of this material has one rendered favorable regarding cotton discs and ago that the price although is elevated it is turned out halved regarding the cost to the Kg of other discs of cotton. To use in finish with suitable paste, it can be used on stones and enamels, it works very well on motors to regimen of variable turns from 2800 in on. it is thrown normally by means of the normal recovery of the metals.
